Barak Valley Engineering College, Karimganj, Assam, India

12th Standard, 65%

Kendriya Vidyalaya Panchgram, Hailakandi, Assam, India

PROJECTS

Cloudnito ([Link](#)) **Jan 2024 - Present**

- This product is based on cloud cost optimisation (started with AWS) and I acts as Senior Software Developer, where I lead, guide and work with the technical team of this product
- Here I with my team created many backend services, integrated stripe payment flow to onboard users, I worked on aws cost explorer to sync cost data on a daily basis.
- Guides discuss and works with the team to create each and every service with high scalability

Skugal ERP ([Link](#)) **Feb 2022 - Present**

- Managing and maintaining schools and their data in the database.
- Services created using Firebase, Firestore, Firebase Authentication, Cloud Functions, AWS Lambda, Payment Integration (CashFree),
- Creating and developing backend services (APIs) to increase its scalability in the production
- Works on UI components for better user interface.

Revitpay ([Numasync](#))**Mar 2023 - May 2024**

- This project was basically about to extract bank transaction datas (tables) into a clear and formatted json view.
- For this I used AWS Textract, S3, SNS, SQS to create the complete loop, Textcract help me to extract the data from the transactions, which I later parsed and filtered more to get the exact required data into json.

Clarks ([Link](#))**Dec 2022 - Feb 2024**

- Created AWS services to manage Product Catalog and Price Details.
- AWS services used: API gateway, Lambda, DynamoDB, S3, Step function, SNS, SQS, Event bridge, Cloud watch etc.
- Other services: Postgres, Docker (for testing locally), Kafka etc.
- This architechture was built using sam template and the runtime environment was NodeJS

Postaira ([Link](#))**Jan 2023 - Aug 2023**

- Led team, where built the complete project (backend & frontend).
- Worked on subscriptions using (stripe, paypal, coinpayment).
- Managed deployments and other services on AWS for this product

Live Sell Now ([Link](#))**Dec 2023 - Feb 2024**

- Here I have worked in the whole product from frontend ui components to backend cutting-edge services.
- In this I have created feature that a user can use to stream a product, also another user can look for that stream (live) and can start bidding within a time set by the streamer.
- I have used AWS services to make working of the feature in this product. It is basically a shopify application/plugin (for shopify product)

Tokenmetrics ([Link](#))**Feb 2022 - Nov 2022**

- Responsible for backend services(Automation/Manual Portfolios + Live Prices + Watchlist etc).
- Worked on the whole UI application(Responsive + Reusable Components).
- Environment: Nx Workspace, Typescript
- Worked on Cron servers,Payment Webhooks
- Mixpanel implementation for user behavior tracking
- Redis implementation
- AWS service used: API gateway, Appsync, Lambda, Cognito, EC2, DynamoDB,
